

Report Volume 97-99

By United States. Dept. Agriculture

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 222 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: . . . or soft grocery sugar. But by far the largest percentage of sugar produced is a brown sugar of 96 polarization, which is sold to the refining companies for the production of white granulated sugar. The three grades mentioned above are produced as what might be termed first sugars. There are always produced second sugars coming from the molasses from the first sugars, which are always brown in color and of somewhat lower polarization. These are often mixed with the first sugar or sold independently as molasses sugars and vary in polarization from 88 up to 93 and 94. The molasses from these sugars is stored over the summer and a third crop often obtained. These third sugars are of still lower polarization and color, ranging from 80 to 85. The small production of white granulated sugar is generally sold direct for consumption to local...

Reviews

This pdf is indeed gripping and exciting. it was written quite completely and valuable. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Kurtis Parisian**

Basically no words to describe. It is filled with knowledge and wisdom I am just pleased to let you know that this is actually the greatest publication I have read within my individual lifestyle and may be the best publication for at any time.
